

Jonathan BRASSARD-POTVIN, ing.

Automated Manufacturing Engineering

Founder of SYSTÈME -D, Decisional Intelligence Firm

For an Order of the future.

Workers, builders, visionaries, the engineering profession is closely linked to the development of societies. Changing contexts lead our profession to evolve, adapt and surpass itself to offer the best of the technical world. Our Order must not only continue to transform, but also be beyond these changes and pave the way for its members. Let us offer ourselves an Order which will reflect our current and future realities, an Order which will know how to accompany us in our challenges, an Order where it will be advantageous and of which we will be proud to be members, an Order turned towards the future.

I wish to contribute to this vision through my background and my various experiences: technical studies, engineering degrees in Canada and France; jobs in Europe, Asia, and North America; in small, medium and large enterprises, in research centers; from consulting engineer to manager, from employee to volunteer administrator, from intra-entrepreneur to founding entrepreneur. My career has allowed me to understand our different realities, to understand our engineering challenges and my work in decisional intelligence, governance and strategy have allowed me to develop my political sense and to apply a management of transparency, fairness and integrity within the teams that I have been part of.

It is important for me to promote an Order that is inclusive, diverse, transparent and participatory. To promote an Order which will know how to reflect the future realities of its members and which will know how to accompany them.

By advocating for robust, fair and equitable decision-making and by advocating open governance, I will help strengthen our Board of Directors, for the benefit of the Order and all of us.

Thank you for your support and trust.
